

Chapter 35 Nervous System**Section 35–1 Human Body Systems (pages 891–896)**

This section describes human organ systems and explains how the body maintains homeostasis.

Organization of the Body (pages 891–894)

1. List the levels of organization in a multicellular organism, from smallest to largest.

- a. _____
- b. _____
- c. _____
- d. _____

Match the organ system with its function.

| Organ System | Function |
|-----------------------------------|-----------------------------------------------------------------------------------------|
| _____ 2. Nervous system | a. Stores mineral reserves and provides a site for blood cell formation |
| _____ 3. Skeletal system | b. Provides oxygen and removes carbon dioxide |
| _____ 4. Integumentary system | c. Coordinates the body's response to changes in its internal and external environments |
| _____ 5. Endocrine system | d. Helps produce voluntary movement, circulate blood, and move food |
| _____ 6. Lymphatic/Immune systems | e. Controls growth, development, metabolism, and reproduction |
| _____ 7. Muscular system | f. Eliminates wastes and maintains homeostasis |
| _____ 8. Reproductive system | g. Serves as a barrier against infection and injury |
| _____ 9. Respiratory system | h. Converts food so it can be used by cells |
| _____ 10. Excretory system | i. Helps protect the body from disease |
| _____ 11. Circulatory system | j. Produces reproductive cells |
| _____ 12. Digestive system | k. Brings materials to cells, fights infection, and helps to regulate body temperature |

13. What are four types of tissues found in the human body? _____

14. The eye is an example of a (an) _____.

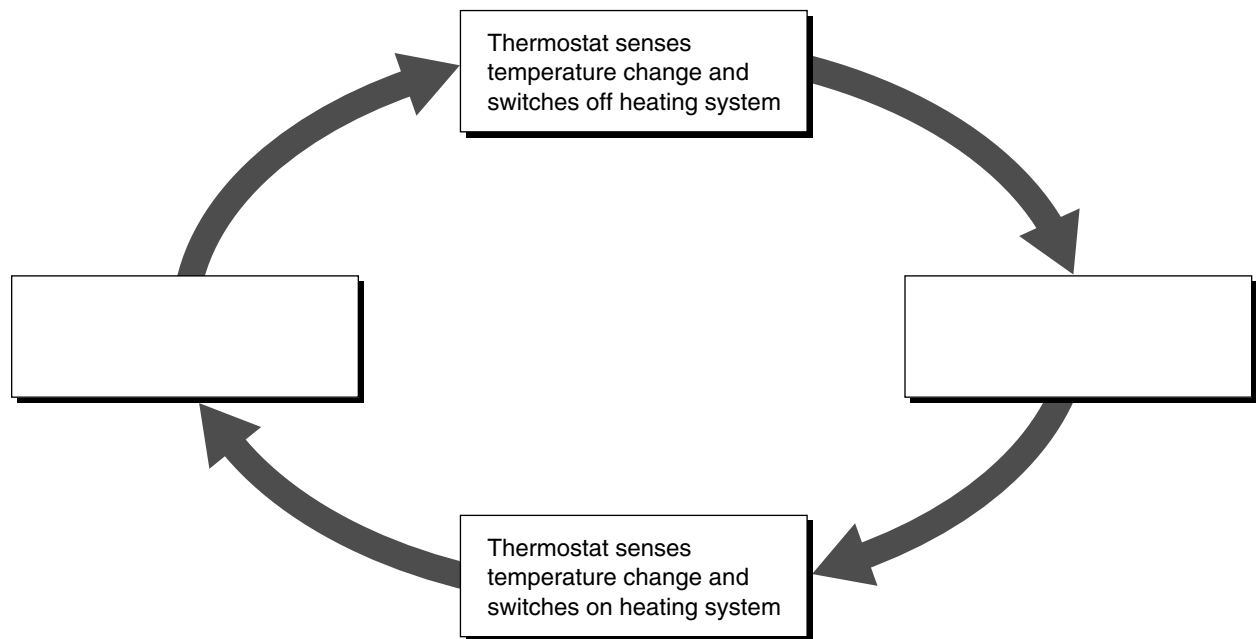

15. Circle the letter of the type of tissue that covers interior and exterior body surfaces.

- a. nervous
- b. connective
- c. epithelial
- d. muscle

16. What is a gland? _____
17. Circle the letter of the type of tissue that connects body parts.
- a. nervous
 - b. connective
 - c. epithelial
 - d. integumentary

Maintaining Homeostasis (pages 895–896)

18. The process of maintaining a controlled, stable internal environment is called _____.
19. The process in which a stimulus produces a response that opposes the original stimulus is referred to as _____.
20. Fill in the missing labels in the diagram to show how a thermostat uses feedback inhibition to maintain a stable temperature in a house.

21. Is the following sentence true or false? The part of the brain that monitors and controls body temperature is the hypothalamus. _____
22. What happens if nerve cells sense that the core body temperature has dropped below 37°C? _____
23. What happens if the body temperature rises too far above 37°C? _____
